MAZONA
STOVES

Welcome to the Mazona Stoves Range 2024/25

For over 30 years we have been manufacturing quality multi fuel stoves at affordable prices. Our range of stoves continues to expand and adapt to ensure we can offer unique stoves designed by our team of experts. Whether you opt for one of our traditional models like the Portland inset, or one of our contemporary designs such as the Callan freestanding with log store or plinth base, you will be sure to find the perfect Mazona stove to bring warmth to your home at an affordable price.

Efficiency & Regulations

CE UK CA

All our stoves are put through a series of tests to ensure they meet ecodesign regulations which were put in place in 2022 to improve air quality. This ensures our stoves are highly efficient, releasing fewer particulate emissions than traditional open fires and are suitable to install in the UK and Ireland.

Our Retailer network

Our stoves are available to purchase from independent retailers throughout Ireland. Each retailer has their own showroom where you can see our stoves on display, often burning so you can get a real feel for our stoves.

Our retailers are experts in their field and will help guide you to ordering the perfect Mazona stove for your home as well as helping you with the installation process.

Mazona Stove Features

5 YEAR WARRANTY

SPARES READY TO ORDER

We offer a 5-year stove body warranty with all our stoves from the date of purchase. For full warranty terms and conditions refer to your stove's user manual.

We keep stock of spares across our full range of stoves as well as selected discontinued models. We are proud to offer dedicated after-sales care alongside our selected retailers to ensure your Mazona stove will last for many years.

ECO DESIGN

All our stoves meet and often surpass ecodesign regulations. This means our stoves are highly efficient and burn fewer particulate emissions than traditional open fires or older stove models.

WOOD BURNING

SOLID FUEL BURNING

To ensure your stove burns as cleanly as possible it is important you choose the correct fuel. If you are burning wood ensure you purchase kiln dried logs with less than 20% moisture. If you are burning solid fuel ensure you use smokeless solid fuel.

Direct Air System

If you purchase a stove with a nominal output over 5kW or live in a new build house which are commonly airtight, you may need to opt for a direct air connection when installing your stove. This is to ensure the stove can get the required air needed for combustion. All our models allow for a direct air connection. Each Mazona stove will either be direct air ready or direct air compatible with an additional direct air kit.
